Lecture #12. Compiling Template.
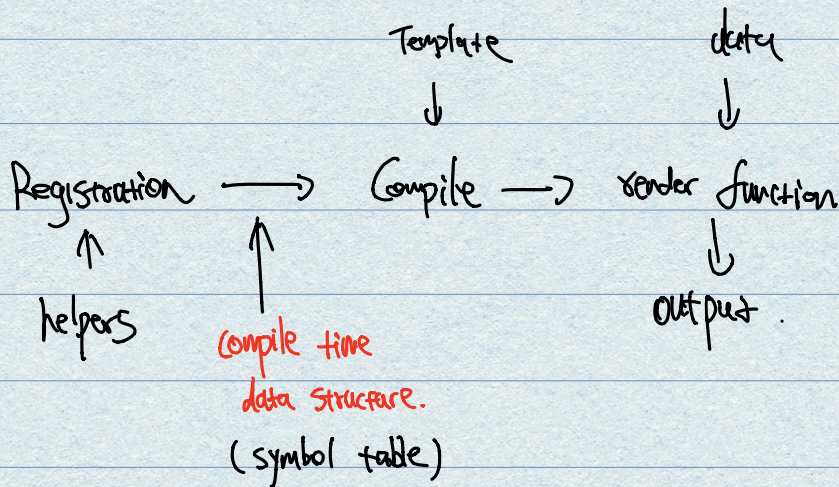

Compile Time v.s Runtime

Compile Time v.s. Runtime Data Structures.

Nested Nature of code gen.

```
        Template              data
           ↓                   ↓
Registration ──→  Compile ──→ render function
    ↑         ↑                    ↓
  helpers   compile time        output.
            data structure.
            (symbol table)
```

... {{ foo }}

→ Can be a registered helper

→ Can be a data.

So it is important to know helpers' names

to differentiate functions from data

Functions are called at runtime.
